# Annata Device Management For Your Equipment Business

Our Device Management Module is built to mitigate the challenges of managing devices across a multi-network, multi-vendor environment by providing users with a secure, web-based management portal containing real-time measurements, insight, and configuration capabilities.

Get a crystal-clear inventory of all your assets, and manage them safely, accurately and at scale. No matter the size of your business, Annata's robust device management equips you with technology to manage your inventory movements, saving time and reducing loss with its always-on visibility for easy monitoring and configuration, all in one place.

Working seamlessly together with Dynamics 365 Finance and Operations, get an enterprise-wide view of device details in real-time and grow your revenue through increased device availability and reliability.

Power Virtual Agents

Importers

- Firm control over spare parts, subparts, and holistic equipment overviews, in different locations.

- Configuration management for various device specifications and versions.

- Accurate reimbursement of incoming/outgoing warranty claims.

Distributors/ dealers

- Manage device procurement, purchase, inventory, logistics, and disposal.

- Execute proactive inspections, with real-time data on device repairs, expiry, and service history logs.

- Track device & reservations, deliveries, simplify quotes and accurately predict future rental opportunities.

Service Providers

- Manage rented assets, collections, exchanges, and inter-site transfers.

- Set up billing and price management for better control over rental contracts or renewals.

- Deploy device inspection and maintenance strategies pre and post contract phase to avoid breakdowns.

Warranty contracts | End-to-end traceability | Sales and rental

Device statistics and reports | **Device Management** | Warranty claims management

Maintenance repair | Trade-ins/used device | Recalls handling

Benefits at a Glance

Centralize device information

Provides accurate information on device location from procurement to disposal and automates critical device management workflows.

Manage aging assets

Equipment lifecycles are extended through more informed maintenance strategies to bring them up to new standards and improve return on investment.

Smarter device monitoring

Artificial Intelligence (AI) and Machine Learning (ML) -enabled monitoring delivers actionable information on device statuses aggregated from various data sources, eliminating information silos.

A single source of truth

Utilize a central repository with appropriate device management functionality (maintenance history, ticketing system, work order management) with customizable fields to track KPIs and reports.
